

Technical Service Bulletin

SUBJECT:				TSB-11-66-001
ACCESSOR	DATE:	October, 2011		
CIRCULATE TO:	[] GENERAL MANAGER	[X] PARTS MANAGER		[X] TECHNICIAN
[X] SERVICE ADVISOR	[X] SERVICE MANAGER	[] WARRANTY PROCESS	OR	[] SALES MANAGER

PURPOSE

This TSB contains technical information and troubleshooting for the accessory Remote Engine Start system for affected vehicles.

AFFECTED VEHICLES

The following vehicles except manual transmission models:

2009–2011 Endeavor 2010–2012 Eclipse/Eclipse Spyder 2009.5–2012 Galant 2009–2011 Lancer 2010–2011 Lancer Sportback 2009–2012 Outlander 2011–2012 Outlander Sport

Correction to Eclipse/Spyder/Endeavor Installation Instructions
Additional Resources

OVERVIEW

Remote engine start allows starting the engine from a distance, before entering the vehicle. Use the Remote Engine Start transmitter to start or stop the engine. The engine will idle for a preset period of time (5, 10, 20 or 30 minutes), or when specific conditions are detected. The factory default is 10 minutes.

For remote starting to occur, the following requirements must be met:

- Transmission in P (Park)
- All doors closed, including liftgate/trunk. (Door locking/unlocking is not affected by remote start.)
- Engine hood closed

Copyright 2011, Mitsubishi Motors North America, Inc.

(3789)

Page 2 of 54

TSB-11-66-001

- Key removed from ignition (for KOS equipped vehicles, the ignition switch is in the LOCK position)
- Transmitter within approximately 150 feet of the vehicle

After the engine is started with the Remote Engine Start transmitter, it will stop if any of the following conditions are detected:

- A door (or liftgate/trunk) is opened
- The accelerator pedal is pressed (except Endeavor, Galant and Eclipse models)
- The engine hood is opened.
- The key is inserted into the ignition switch (for KOS vehicles, the ignition switch is turned from the LOCK position).

Remote Engine Start Kits and Transmitters

Model	Affected Vehicles	Part Number
2009.5 - 2012 Galant	VIN 9E024751 and above	MZ360271EX / MZ360360EX *
2010 Eclipse/Eclipse Spyder	From start of 2010MY production	MZ360271EX / MZ360360EX *
2009 - 2011 Endeavor	From start of 2009MY production	MZ360271EX / MZ360360EX *
2009 Lancer	From start of 2009MY production	MZ360272EX
2010 - 2011 Lancer	After June 1, 2008 production	MZ360340EX
2010 – 2011 Lancer Sportback	From start of 2010MY production	MZ360340EX
2009 Outlander	From start of 2009MY production	MZ360272EX
2010 - 2012 Outlander	From start of 2010MY production	MZ360340EX
2011 - 2012 Outlander Sport	From start of 2011MY production	MZ360340EX

^{*} MZ360360EX is a mid-year replacement of the MZ360271EX remote engine start kit.

Older transmitter

Part number MZ360300EX

- Provided with MZ360271EX and MZ360272EX kits

Newer transmitter

Part number MZ360361EX

Provided with MZ360360EX and MZ360340EX kits
 This may also be used as a replacement transmitter for the MZ360271EX or MZ360272EX kit.

(See Replacement Transmitters below.)

Replacement Transmitters:

When ordering a replacement for the MZ360271EX or MZ360272EX original transmitter, a newer one, MZ360361EX will be provided. The features on the new transmitter will be limited to the same functions as the older one that was provided in the kit.

To program the replacement transmitter for MZ260271EX, see MZ360360EX Programming.

To program the replacement transmitter for MZ360272EX, see MZ360340EX Programming.

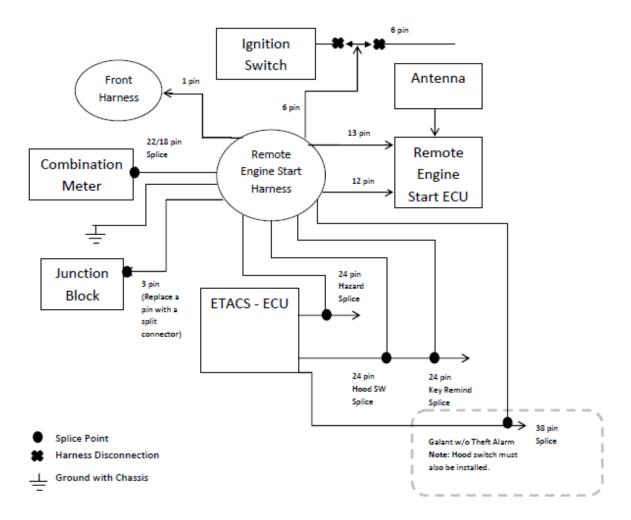

The procedure for setting the engine idling time must follow the procedure for MZ360272EX.

For safety reasons, only one transmitter can be programmed to the system at a time.

Wire Routing

NOTE: Detailed installation instructions are on the Mitsubishi Dealer Link. (See Additional Resources at the end of this TSB).

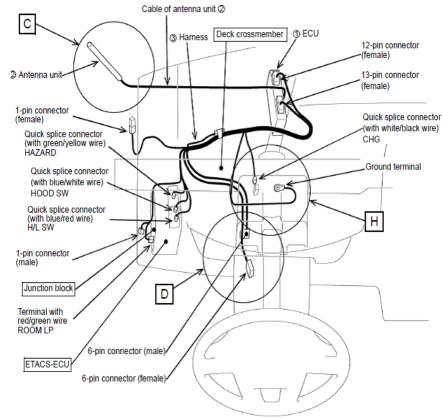

Eclipse, Eclipse Spyder, Galant, Endeavor Remote Engine Start Kit Part No. MZ360271EX/MZ360360EX

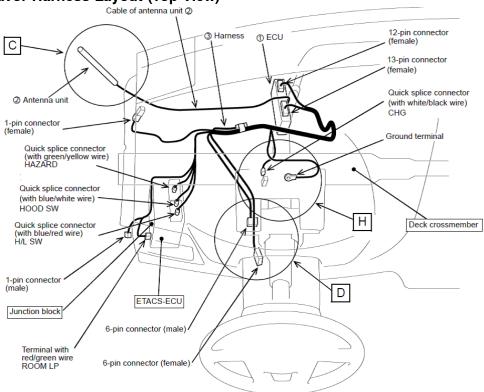

WIRING DIAGRAM A

Part No. MZ360272EX

Lancer Harness Layout

Remote Engine Start Transmitter Operation

Before operating the transmitter, verify that:

The shifter is in the "P" (Parking) position.

All doors (including the rear gate and spare tire carrier) are securely closed.

The engine hood is securely closed

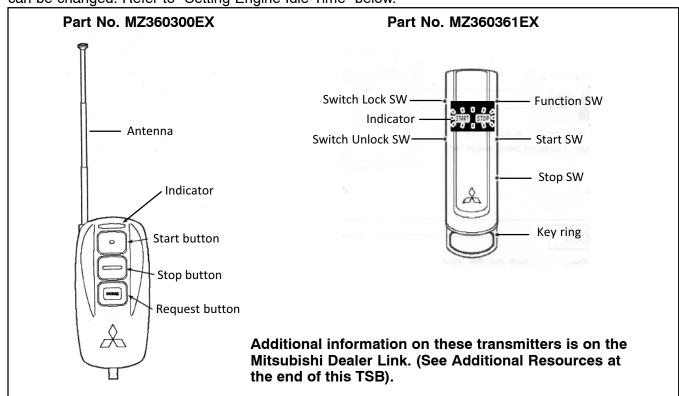

The vehicle key is removed from the ignition switch. For vehicles equipped with the F.A.S.T. Key, the ignition switch is on the LOCK position.

The transmitter will not start the engine unless all of the above conditions are properly set.

Starting Engine	Stopping Engine
 Push the request/function button. The indicator will blink for approximately 2 seconds. Push the start button while the indicator is blinking. The engine starting signal will be transmitted when the indicator stays on for 3 seconds. When the engine starts, the hazard warning light on the vehicle will flash once. 	 Push the request/function button. The indicator will blink for approximately 2 seconds. Push the stop button while the indicator is blinking. The engine stop signal will be transmitted when the indicator stays on for 3 seconds.

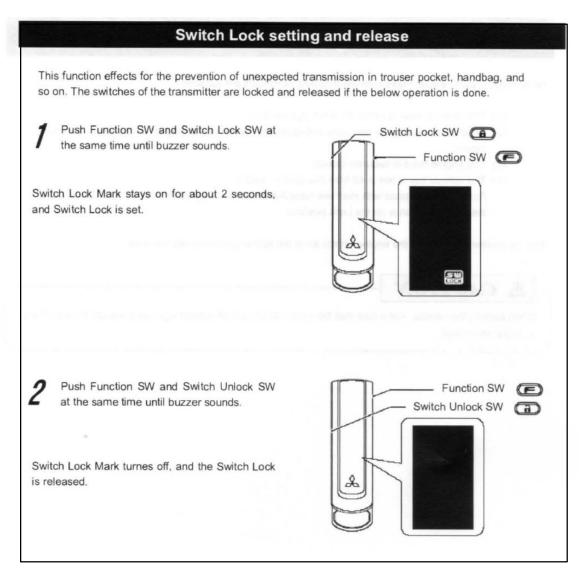

NOTE: Extend the antenna if necessary. The transmitter signal will reach further when the antenna is extended.

The remote engine starter will stop running after 10 minutes (factory default setting). The time setting can be changed. Refer to "Setting Engine Idle Time" below.

Switch Lock

The remote for the MZ360360EX and MZ360340EX accessory parts have a switch lock function. Details are described below:

Setting Engine Idling Time

Once a vehicle is started by the remote engine start system, the engine, if left undisturbed, will continue to idle for a set time. This is referred to as "Engine Idling Time." The factory default setting is 10 minutes. It can be adjusted as shown below.

Part Number MZ360271EX/ MZ360272EX

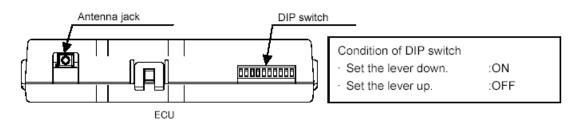

Setting Idling Time

The idling time can be set to 5, 10, 20 or 30 minutes.

The initial setting at shipment is 10 minutes.

How to set the idling time

With the engine stopped, set the No. 2 and No. 3 pins of the DIP switch on the ECU to the positions shown in the following table.

	Idling time		
No. 2 pin	No. 3 pin	Drawing	
OFF	OFF	ON 1 2 3 4 5 6 7 8 9 10	10 min. (initial setting)
ON	OFF	ON 1 2 3 4 5 6 7 8 9 10	20 min.
OFF	ON	ON 1 2 3 4 5 6 7 8 9 10	30 min.
ON	ON	ON 1 2 3 4 5 6 7 8 9 10	5 min.

⚠ CAUTION

Always set the DIP switch pins other than the No. 2 and 3 pins to the OFF position.

7	Press the "Stop" button on the transmitter for 1 second or more.	ECU beeps twice.
8	Within 10 seconds after the ECU beep, press the Unlock button on the vehicle remote 3 times.	Door locks automatically lock and unlock. Then several seconds later they lock and unlock again.
9	Remote Engine Start registration is complete.	

Common Remote Engine Start Issues

CONCERN	SUGGESTIONS
Cannot program Remote Engine Start transmitter	Verify that the vehicle is not affected by the incorrect wiring instructions for 2009 & later Endeavors and 2010 & later Eclipse/Eclipse Spyder covered later in this bulletin.
	See programming instructions (RKE, KOS, Push Button) and also Tech Line Video on Programming
	Verify correct installation (MZ360360EX, MZ360340EX, MZ360272EX, MZ360271EX). Full operation and installation instructions can be found on the Mitsubishi Dealer Link.
	Proper Radio Frequency operation of the remote can be verified using the Mitsubishi Radio Frequency Detector Part #: MIT47305.
	Perform hardware troubleshooting diagnostics (MZ 360360EX, MZ360340EX, MZ360272EX, MZ360271EX). Full operation and installation instructions can be found on the Mitsubishi Dealer Link.
Engine will not start using Remote Engine Start system	User must first press the function button, then the start button, to start the engine with the remote.
	If the vehicle has been parked for more than two weeks, turn the ignition switch to ACC and then back to OFF. Wait three seconds or more and the system will be reactivated.
	Verify that the vehicle is not affected by the incorrect wiring instructions for 2009 & later Endeavors and 2010 & later Eclipse/Eclipse Spyder covered later in this bulletin.
	Verify correct installation (MZ360360EX, MZ360340EX, MZ360272EX, MZ360271EX). Full operation and installation instructions can be found on the Mitsubishi Dealer Link.
	Proper RF operation of the remote can be verified using the Mitsubishi RF Detector P/N MIT47305.
	Perform hardware troubleshooting diagnostics. First verify the <u>transmitter setup</u> then proceed to the appropriate model (MZ360360EX, MZ360340EX, MZ360272EX, MZ360271EX). Full operation and installation instructions can be found on the Mitsubishi Dealer Link.

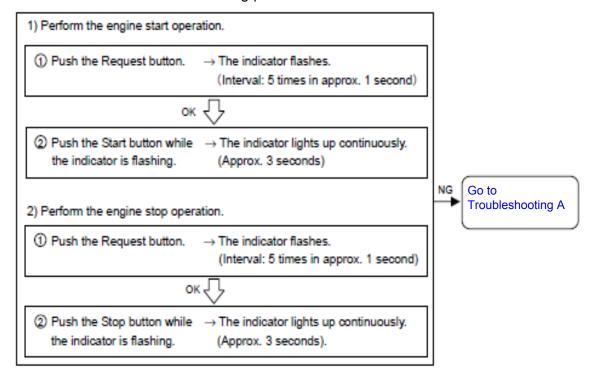

How to change the engine idling time in the Remote Engine Start system?	See Setting Engine Idle Time MZ360360EX/MZ360340EX, MZ360272EX/MZ360271EX.
Can a second transmitter be programmed to the Remote Engine Start system?	No. For safety reasons, only one remote can be programed to a specific remote engine start system at one time.
	However, a replacement transmitter can be programmed. See Replacement Transmitters.
Engine shuts off when the driver's door is opened.	This is normal operation of the system. Refer to the Remote Engine Start system owner's manual on the Mitsubishi Dealer Link.
Parking lights do not flash after the engine is started through the Remote Engine Start system.	Flashing parking lights feature is only available on some models. Refer to the Remote Engine Start system owner's manual on the Mitsubishi Dealer Link.
Indicator light on the transmitter does not flash or stay on.	Verify that the transmitter is not being operated within 2 seconds of engine start/stop.
	Verify batteries are properly installed in the transmitter.
	Replace discharged transmitter battery.
Indicator light on the transmitter flashes and stays on.	Verify the transmitter setup.
	Fully extend the antenna on the transmitter or operate the transmitter at a closer range
	If the vehicle has been parked for more than two weeks, turn the ignition switch to ACC and then back to OFF. Wait three seconds or more and the system will be reactivated.
	If the buzzer of the remote start system sounds for about three seconds when the key is inserted into the ignition switch or the ignition switch is turned to "ON", there may be a possible faulty ECU or remote control.

Troubleshooting Part No. MZ360271EX (page 1 of 11)

(Eclipse, Eclipse Spyder, Galant, Endeavor)

Perform troubleshooting E to L and confirm proper installation of the accessory. Once confirmed, perform operation check.

Checking Harnesses

The probes of the multimeter must be applied from the harness side of the connector.

1. Checking connector terminals

Check that the battery voltage is 10 V or higher. Then, while referring to the circuit diagram, check each connector of the connector ①(13-pin, natural) and the connector ②(12-pin, black) connected to the ECU in accordance with the following table using a multimeter.

If any terminal is out of specification, perform the applicable troubleshooting shown in the table.

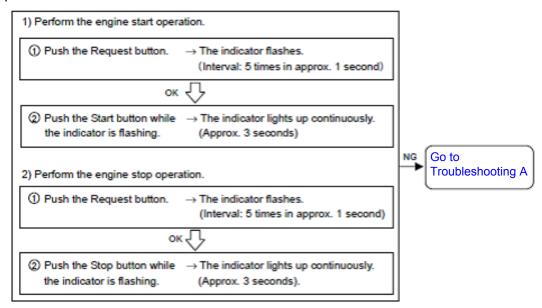

Connector	Terminal	Item	Check condition	Specification	Check	Trouble-
No.	No.					shooting
1	1, 5, 7	Voltage between the terminal	Any time	10 to 14 V		Е
		and the body ground				
	3	Voltage between the terminal	Ignition key position	0 V→10 to 14 V		F
		and the body ground	"ON" → "ST"			
	4, 12	Voltage between the terminal	Ignition key position	0 V→10 to 14 V		F
		and the body ground	$"ACC" \to "ON"$			
	9	Voltage between the terminal	Ignition key position	0 V→10 to 14 V		F
		and the body ground	"ACC" \rightarrow "ON"			
	6	Voltage between the terminal	Ignition key position	0 V→10 to 14 V		F
		and the body ground	"OFF" \rightarrow "ACC"			
	8	Continuity between the	Hazard warning lamp	No continuity		G

Circuit Diagram

Troubleshooting Part No. MZ360360EX (page 11 of 11)

Checking Harnesses

The probes of the multimeter must be applied from the harness side of the connector.

1. Checking connector terminals

Check that the battery voltage is 10 V or higher. Then, while referring to the circuit diagram, check each connector of the connector ①(13-pin, natural) and the connector ②(12-pin, black) connected to the ECU in accordance with the following table using a multimeter.

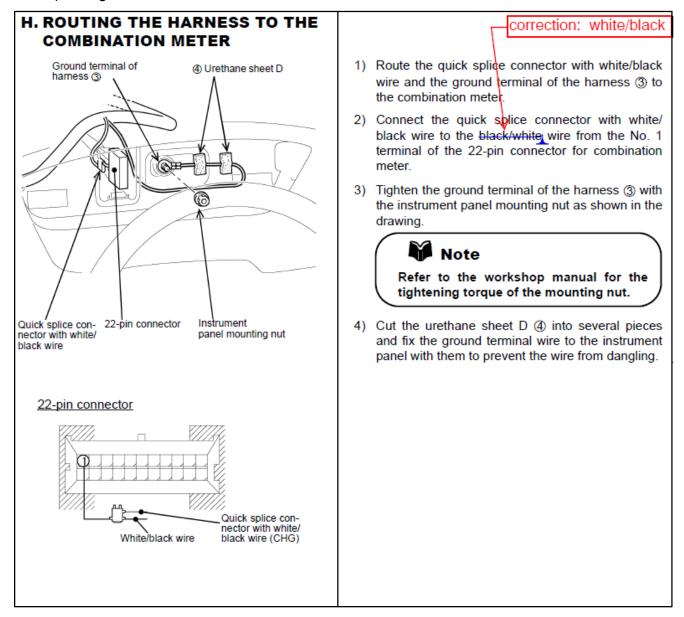

If any terminal is out of specification, perform the applicable troubleshooting shown in the table.

Connector No.	Terminal No.	Item	Check condition	Specification	Check	Trouble- shooting
1	1,5,7	Voltage between the terminal and the body ground	Any time	10 to 14 V		E
	3	Voltage between the terminal and the body ground	Ignition key position "ON" → "ST"	0 V→10 to 14 V		F
	4,12	Voltage between the terminal and the body ground	Ignition key position "ACC" → "ON"	0 V→10 to 14 V		F
	9	Voltage between the terminal and the body ground	Ignition key position "ACC" → "ON"	0 V→10 to 14 V		F
	6	Voltage between the terminal and the body ground	Ignition key position "OFF" → "ACC"	0 V→10 to 14 V		F
	8	Continuity between the terminal and the body ground	Hazard warning lamp switch "OFF" → "ON"	No continuity → Continuity exists		G
	10	Continuity between the terminal and the body ground	Insert the ignition key into the key cylinder. → Remove the key.	No continuity → Continuity exists		O
	11	Continuity between the terminal and the body ground	Hood closed → Opened	No continuity → Continuity exists		Н
	13	Continuity between the terminal and the body ground	Any time	Continuity exists		L
2	15	Voltage between the terminal and the body ground	All door closed → A door opened (Perform on every door.)	10 to 14 V→0 V		-
	18	Voltage between the terminal and the body ground	Ignition key in "ON" position → Start the engine using ignition key.	0 V→10 to 14 V		J
	24	Voltage between the terminal and the body ground	Ignition key position "ACC" → "ON"	0 V→10 to 14 V		K

Correction to Remote Engine Start Installation Instructions for Eclipse/Spyder/Endeavor

Remote Engine Start (MZ360271EX & MZ360360EX) Instructions Correction – 2009 & later Endeavor, 2010 & later Eclipse/Eclipse Spyder.

Wire color descriptions in the installation instructions for the section "ROUTING THE HARNESS TO THE COMBINATION METER" are incorrect for **affected vehicles listed above only.** The wire colors in the pin diagram are correct.

If you cannot program the Remote Engine Start, or if the engine will not start with the transmitter, confirm the proper wire routing.

Additional Resources

- Remote Engine Start installation and basic troubleshooting information are on the Mitsubishi Dealer Link:
 - a. Log onto the Mitsubishi Dealer Link.
 - b. Under the "Parts" tab, click on "accessories".
 - c. On the left side of the screen, click on "Parts & Accessories Guide".
 - d. Select the appropriate vehicle model year.
 - e. Enter the Remote Engine Start Kit part number (see part number listing earlier in this bulletin).
- 2. Remote Engine Start informational videos for some models are on the Mitsubishi Dealer Link:
 - a. Log onto the Mitsubishi Dealer Link.
 - b. Under the "Service" tab, click on "systems".
 - c. On the left side of the screen, click on "Techline Videos".
 - d. The videos will be listed on the left menu bar. Click on the desired video link.
